Distribution of Foods and Books

The main concept of this is to be able to distribute non perishable food items and books throughout rogers and surrounding areas by locating parks that contain mini library and pantry cubbys.

How will we collect data? We will be able to collect data by first placing items in the cubbys and then checking on them afterwards to see how many people from the community actually benefit from these cubbys.

Placing of Items

On the 24 of November our group went ahead and began to distribute these items and books throughout NWA area. In order to be able to collect data we marked the items that were left with Stickers in order to distinguish from others items that were already there.

Stats

In Arkansas, 499,950 people are facing hunger - and of them 149,670 are children. Meaning 1 in 5 children face hunger. This is why we believe that pantries like these are so important because although they are not overall huge a small difference is better than no difference at all.

In Arkansas the estimated population is 3 million people.

Calculations:

An estimated 16.7% of the population is suffering from hunger.

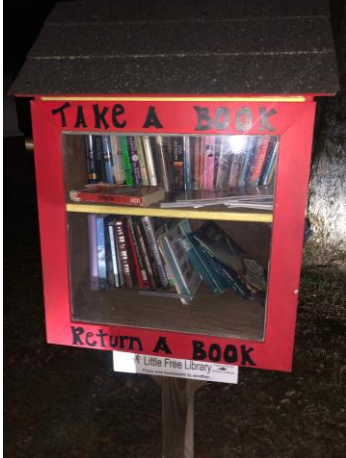

While an estimated 83.3% is currently not affected.

Effect on community
